

Winter Gritting

We use Nurture proactive gritting services; the service is automatically activated when the road surface temperature reaches the agreed trigger level.

We have two trigger points, one when a partial grit of the site is undertaken, as per the plan below and another when snow is forecast, or the temperature is much lower where the whole site is then gritted.

If there is more than 5cm of snow on the roads mechanical snow clearance will take place on the main routes.
